

Cloud Compliance and Security Inspector

A PwC Product

Security and compliance for multi-cloud environments

In a cloud environment, even a single misconfiguration can lead to major consequences for your company.

The verification of misconfigurations is complex and the results of different cloud providers are not comparable.

To ensure compliance, an automated and regular check of the configurations is required.

The **Cloud Compliance and Security Inspector** is a platform-based application for assessing and monitoring security configurations in hybrid-cloud and multi-cloud environments (AWS, MS Azure, GCP, etc.).

Our digital solution enables:

- **Standardisation:** A scoring system developed by PwC provides comparable assessment results on the security of multi-cloud environments.
- **Benchmarking:** The digital solution verifies the compliance with various standards and leading practices, e.g. NIST, CIS, ISO, independent PwC good practices or self-generated good practices.
- **Compliance monitoring:** Our tool enables continuous monitoring of compliance with standards or user and authorisation audits.

Your benefits at a glance

- Get an independent and holistic understanding as well as an overview of cloud security processes
- Reduce costs and time for audits
- Comply with relevant safety standards such as ISO, NIST and CIS
- Identify potential security gaps in the cloud configurations

**Ensure security and compliance for your multi-cloud environments.
We will tell you how.**
