ESG Reporting Manager – CSRD

pwc

With the ESG Reporting Manager – CSRD, we have developed a smart solution that supports your company in the creation of CSRD-compliant sustainability reporting – based on your desired SAP architecture: SAP Datasphere or the Sustainability Control Tower (SCT).

CSRD – Scope and challenges

- Capital market-oriented companies with 500 or more employees are **obliged** to disclose their ESG performance in their annual reports on the basis of the European Sustainability Reporting Standards (ESRS).

- The **challenge** here is to record, calculate and interpret the more than 1,000 data points from over 80 KPIs and to ensure assurance for the auditor.

- Companies must also aggregate the data in a centralised data model and ensure sufficient data granularity.

- Non-compliance with the requirements can result in severe **consequences** such as fines of up to EUR 10 million or 5% of total turnover.

Your advantages with PwC's ESG Reporting Manager – CSRD

- **One-stop shop:** the ESG Reporting Manager – CSRD is the only solution that maps all CSRD requirements **fully integrated** in SAP – you **do not need any other systems** and benefit from the usual integration advantages of SAP.

- Our solution consists of **predefined business content to extend your existing SAP landscape** with all the necessary requirements via an installation package.
  - **Data collection** – capture all quantitative and qualitative CSRD data points via predefined questionnaires and workflows.
  - **Data models** – calculation of all relevant KPIs using predefined data models and calculation logic
  - **Dashboards & AI** – additional analytics functionalities via predefined dashboards

- The content can be fully customised to your individual needs after installation.

- Our ESG software is audit-proof and is continuously updated. This means it fulfils all legal requirements – even when legislation changes.

AI-supported increase in efficiency in sustainability reporting

By integrating advanced AI functions, we are taking the efficiency and accuracy of our software to a new level:
- **AI Gap Assessment:** identification of information gaps
- **Pre-Assignment of Content:** pre-filling of content in SAP Build Apps
- **Automated Report Generation:** generation of a draft report
- **Comparative Report Insights:** comparative insights between CSRD reports
