

Risk Strategy and Analytics

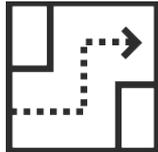

A PwC Product

Advanced data-driven analytics and decision-support for risk managers

YOUR CHALLENGE

Throughout your current management systems **huge risk portfolios** are generated. Drawing **quantitative conclusions** requires advanced statistical knowledge and is therefore hard to achieve.

OUR SOLUTION

PwC's SaaS solution **supports local risk assessments**, aggregates large risk portfolios and provides an **easy-to-use risk simulation**. These functions enable you to interpret results, **make well-founded risk assessments** as a basis for **management decisions**.

JOINT BENEFITS

We combine PwC's **best practices** and our **experience** from years of consulting to provide the Risk Strategy and Analytics user with a **guided path** to the solution.

Let us give you an insight into the three **most important reasons** to choose **Risk Strategy and Analytics** for your decision-support:

It's safe and compatible

With the standards of PwC and our co-creational partner SAP, your risk management complies with new IDW Auditing Standards 340, 980 and 981 and the used platform with highest security standard C5. RSA is compatible with any GRC IT tool you may already have in place.

It's user-friendly

Connect profound statistical methods to the information you need. Whether you are a risk manager, business or controlling expert, our solution allows you to significantly improve the data quality, assess the blind spots in your portfolio and draw clear conclusions.

It's fast and easy

Thanks to the cloud-based Business Technology Platform (BTP) from SAP, you are always up to date. We provide you with high-performing calculation capacities and latest releases. New functionalities are made available without major implementation efforts.

Put your risk management on the fast track. We will show you how!
